

Flood Levels and Borderlines: Livestock Farming and Evictions Resistance at the !Garib/Orange River in Southern Africa

Luregn Lenggenhager and Andrea Rosengarten

Summary

This article places the life history of an African livestock farmer on the banks of the !Garib/Orange river in Namibia in the context of the forced removal threats he has faced in the apartheid and post-apartheid eras. Despite being excluded from land ownership opportunities throughout the twentieth century and up to the present day, this farmer and his family have used their nuanced environmental knowledge of the river, its position, and its flooding history to their advantage to maintain their livelihood. However, the unclear demarcation of the Namibian-South African international border with respect to the river complicates the family's present challenges.

For the last few hundred kilometers before flowing into the Atlantic Ocean, the !Garib or Orange River becomes the border between Namibia and South Africa. It emerges as a narrow strip of vegetation in a vast semi-desert. In this piece, we consider the life histories of stock farmers on the riverbanks of the !Garib/Orange. Removal attempts directed against African farmers in both the apartheid and post-apartheid eras demonstrate the persistence of racial inequality in land ownership in this region. Meanwhile, the farmers' resistance strategies highlight historical and contemporary opportunities at the river for transcending the racialized economic structures of the borderland.

In the center of the story stands Willem Cloete,¹ an elderly farmer, father of eight sons, and owner of about one hundred goats, 50 cattle, and some sheep, who herds on the northern banks of the !Garib/Orange River, south of the town of Warmbad. In the view of many white farm owners, past and present, Cloete is an illegal squatter—a poor, landless African herder with no place in a modern, capitalist future. This trope disguises the fact that Cloete is successful and resourceful. His small farming operation at the riverbank has helped put his sons through university in Namibia and South Africa. Cloete describes his family history as one of frequent movement along the river, following its changing patterns to optimize grazing. While he commands family history with certainty up to the generation of his great-grandfather, Petrus “Karihenene” Cloete, born in 1895, he knows that his great-grandparents' ancestors were also riverside people of this region.

Willem Cloete and family members by their farm, looking due west over the !Garib/Orange River. Namibia lies to the north on the right riverbank side, and South Africa to the south on the left riverbank side.

Environmental and political events have significantly shaped the fates of Cloete and others living along the river before him. Sometimes changes in the river flow (due to floods, droughts, or new dams) required shifts in herding strategy, while the livelihoods of small African stock keepers were also continually disrupted by colonial interventions and, later, policies of land dispossession and racial segregation. In Cloete's nearby area, the Homsdrift mission station had been founded at the turn of the twentieth century. It was part of a network of new Catholic missions attempting to "civilize" the semi-nomadic hunters and herders of the region, in part by incentivizing a permanently sedentary lifestyle. Missionaries solicited Africans to live close to the mission station, where they could water their livestock at the only perennially flowing river in this arid territory.

The Cloete goats are let out to graze. In the background are the family's dwellings. Cloete expressed that the family has chosen not to invest in building more permanent housing structures for fear that the neighboring farm owner will destroy them.

However, the intensification of racialized land laws during South Africa's occupation of Namibia (1915–1990) gradually upended these semi-formal communal land agreements from earlier mission times.

Black people living along the river by Homsdrift were removed by the apartheid government beginning in the 1950s. In the 1970s the mission was closed and sold as private land to a white farmer. While many residents had no choice but to accept resettlement and eventually employment as cheap black labor on white farms, the Cloetes—along with about 10 other families—resisted removal and went upriver to more remote, rocky territory. Since the apartheid era, members of the Cloete family have tended to their modest but profitable herds along this more secluded section of river.

Although the Cloetes can demonstrate family occupancy since at least the late nineteenth century in the area, they have never possessed official rights to the land they live on. The Cloetes, like the majority of black families in the region, have not yet benefitted from Namibia's post-apartheid land reforms. To this day, adjacent white landowners consider the entire riverside area to be their own private land. Over the years they have destroyed Cloete's livestock enclosures and surveilled his movements. Tensions reached a high point in 2015 when the owner of two farms (together more than 80,000 hectares) in the Homsdrift area sought to convert the land into a profitable luxury lodge and "nature reserve" and also secure unspoiled access to the river for tourists. When the Cloetes refused yet again to move, the farm-turned-hotel owner approached the Namibian courts to order their eviction.

The Cloete family's small cemetery on the grounds of their farm. Here, they visit the grave of Willem Cloete's great-grandfather, b. 1895, d. 1951.

This 2015 case was more legally complicated than the farm owner had anticipated. The court proceedings communicated that in the view of the Namibian government, the international border at this stretch of the river was the high-water mark on the northern bank, based on historical floods. Therefore, the area between the river and its flood marks could not be treated as the private lands of an individual landowner in Namibian court. Cloete told us in January 2020 while showing us around his small riverside operation: “Look at the river sand in the mountains—*that* shows where the private land of the farmer begins.” Indeed, the big flood of 1925 that he had heard about from his grandfather produced sand deposit lines that are still visible in the landscape.

The ruins of a cattle enclosure (kraal) on the former Homestead mission station grounds that the Cloete family made use of until late 2019. Weeks before our January 2020 visit with Cloete, the kraal was destroyed by the neighbouring farm owner to prevent Cloete's further use of it.

These deposits saved Cloete from eviction—at least for now. But they leave entangled questions about post-apartheid restorative justice, international boundaries, land ownership, law, and environment unanswered. If the land at the riverbanks is not private land, to whom does it belong? Moreover, in which country is it situated? The South African government still considers people like Cloete living along the river's northern banks to be Namibian. Cloete is therefore maneuvering in a precarious limbo, living, and farming in an international no-man's-land without robust legal protections. He clarifies that he only seeks freedom of movement without threats of violence, and the official allocation of this fertile territory along the riverbanks as communal land for the historically dispossessed.
